Tolly Easy Trade

Find the coins that are moving. Every day.

What is Tolly Easy Trade?

A system that helps you find coins worth trading, within just a few minutes.

500+
coins on the market

→

A few
coins worth trading

→

Minutes
not hours of scrolling charts

Why Tolly Easy Trade?

You wake up and want to trade crypto.

But where do you start?

> 500 Coins listed on the market

? no clear sign which one to pick first

Time lost scrolling charts every morning

How most traders pick coins today:

News
Chasing coins that are making headlines

24h % Gainers / Losers
Picking from the biggest movers of the last 24 hours

High risk, and hard data to trade on.

Tolly Easy Trade cuts through the noise.
A daily report with Risk, leverage and volume built in, so you know exactly where to start.

The Concept

Collect market data every day, analyze it with a proprietary algorithm, and surface the coins that are trending.

1 Collect

Gather market data for every coin, every day

2 Analyze

Run it through our specialized algorithm

3 Discover

Surface the coins that are trending now

Max Leverage as a Risk Signal

From my own trading experience, coins that support a high Max Leverage on the perpetual market (e.g. stable coins, BTC, Solana, Ethereum at 75x or more) tend to have charts with lower risk than coins with a low Max Leverage. In other words, these coins can be traded at lower risk, and the lower the Max Leverage goes, especially below 50x, the higher the risk.

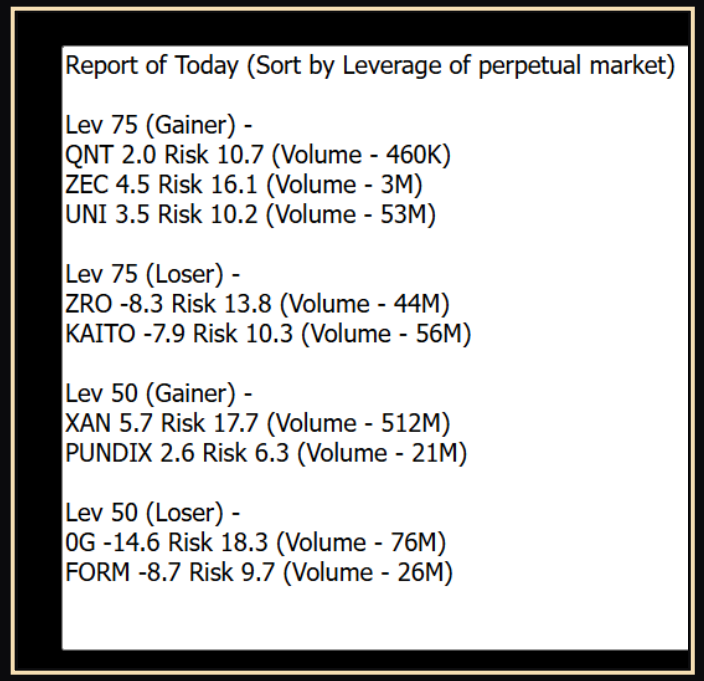
75x or more — Lower risk
BTC, Solana, Ethereum, stable coins

50x - 75x — Medium risk
Check the Risk value in the report

Below 50x — Higher risk
Smaller Max Leverage, riskier chart

What Is the Report?

Example: Report of Today (Sort by Leverage of perpetual market)



Lev 75 (Gainer) -

QNT 2.0 Risk 10.7 (Volume - 460K)

ZEC 4.5 Risk 16.1 (Volume - 3M)

UNI 3.5 Risk 10.2 (Volume - 53M)

Lev 75 (Loser) -

ZRO -8.3 Risk 13.8 (Volume - 44M)

KAITO -7.9 Risk 10.3 (Volume - 56M)

Lev 50 (Gainer) -

XAN 5.7 Risk 17.7 (Volume - 512M)

PUNDIX 2.6 Risk 6.3 (Volume - 21M)

Lev 50 (Loser) -

0G -14.6 Risk 18.3 (Volume - 76M)

FORM -8.7 Risk 9.7 (Volume - 26M)

> Out of the many coins on the market, Tolly Easy Trade analyzes them for you and narrows the list down to just a few. These coins have held their rank steadily for several days in a row, which means very low volatility. The system also calculates a Risk value for each coin.

Caution

Max Leverage is a tool for choosing coins, not a reason to use high leverage.

We do not recommend trading perpetuals with high leverage.

The Max Leverage of each coin is only useful for helping you choose which coin to trade. It is not a suggestion to use high leverage. Please do not misunderstand.

EXAMPLE

BTC ETH Solana — Lower risk

Max Leverage above 75x

vs

Meme coins — Higher risk

Max Leverage around 10x

A high Max Leverage means a lower-risk coin to pick. It does not mean you should open a high leverage position.
